Dear Mr Lake,

I am writing to inform you of my opposition to genetic engineering of foods. I am particularly outraged at what has been allowed to go on in this country regarding milk, an important part of every American Child's diet. We have allowed all sorts of chemicals like rbgh to be included in our food supply without knowing what the long term effects on developing bodies might be. I was extremely happy to learn that the Canadian government did not allow growth hormones to be used in milk. This is the direction we all need to move in. However, if we cannot prevent genetic engineering of our food we should atleast require labeling of food as such so that consumers can make informed decisions about what they purchase, and about what they want ot feed their families.

Thank you for your time,
Ellyn McCue
